

LAND ROVER DASH CAM NOW AVAILABLE FROM BAYSWATER EUROPEAN

The Land Rover Dash Cam integrates seamlessly into your vehicle's cabin and electrical system, recording footage using high definition front and rear video camera technology*. Now available from Bayswater European, this Land Rover accessory provides a reassuring additional level of vigilance, whether driving alone or with passengers.

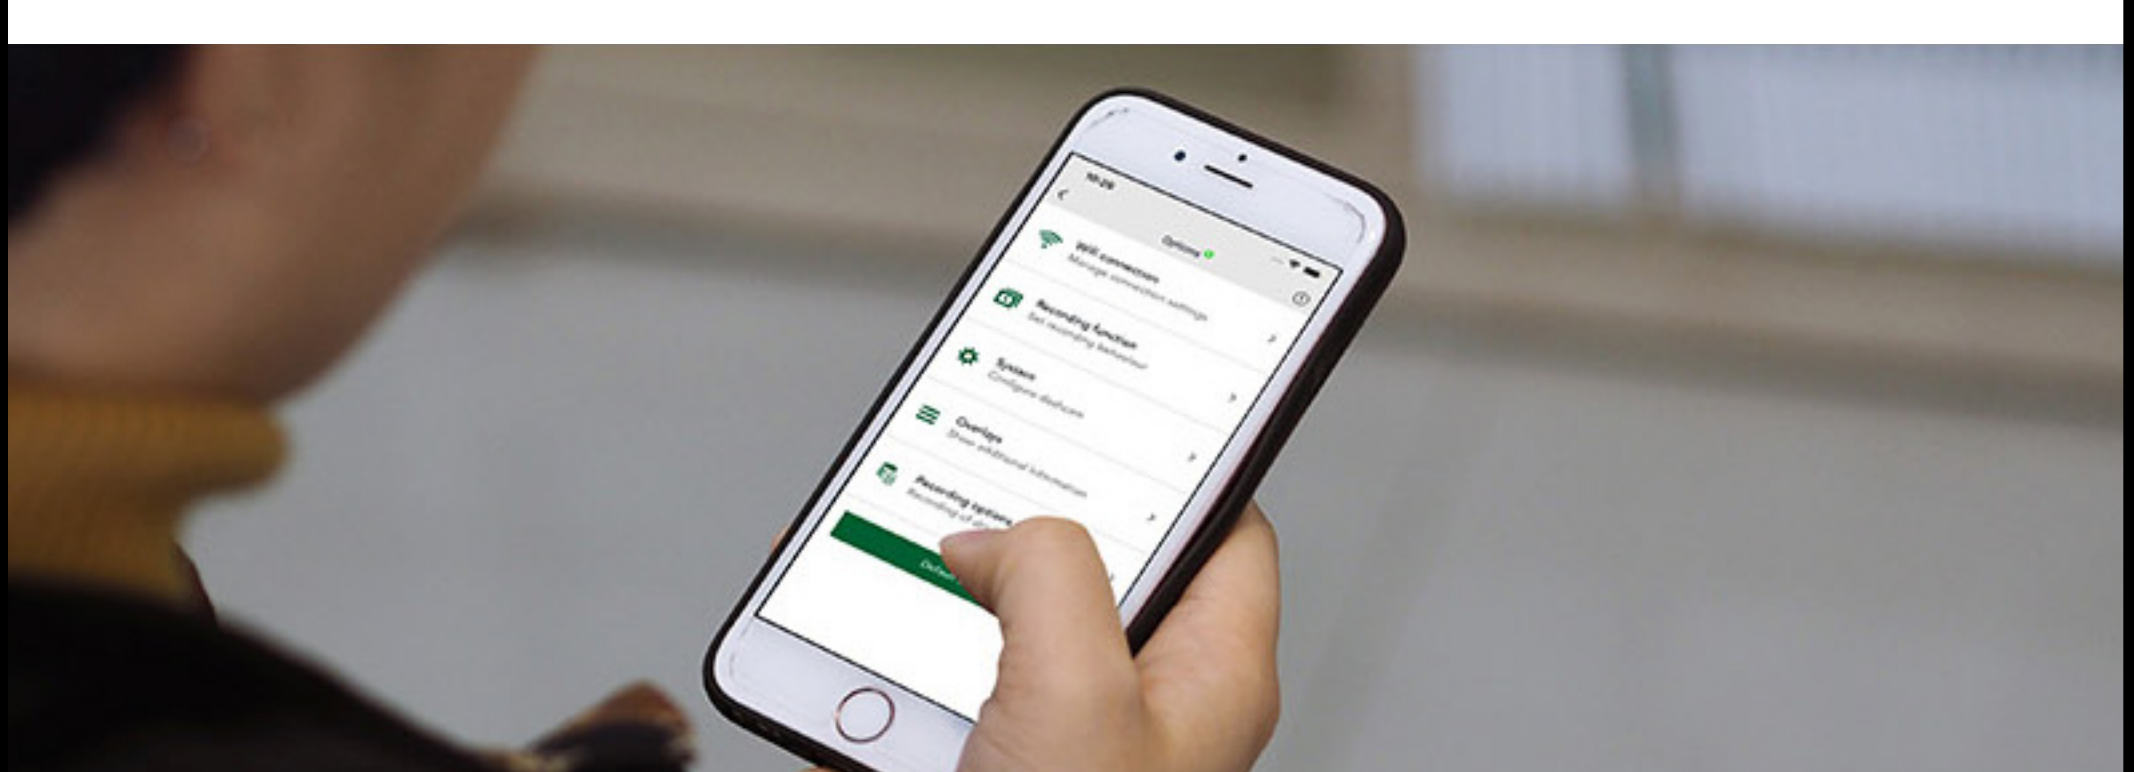

EVERYTHING YOU NEED

Each Dash Cam includes front and rear camera systems, plus a 32GB SD card for storing recordings which are triggered automatically in the event of an accident or heavy braking. There's also a manual record option that allows you to capture any special driving adventures that you want to remember and share.

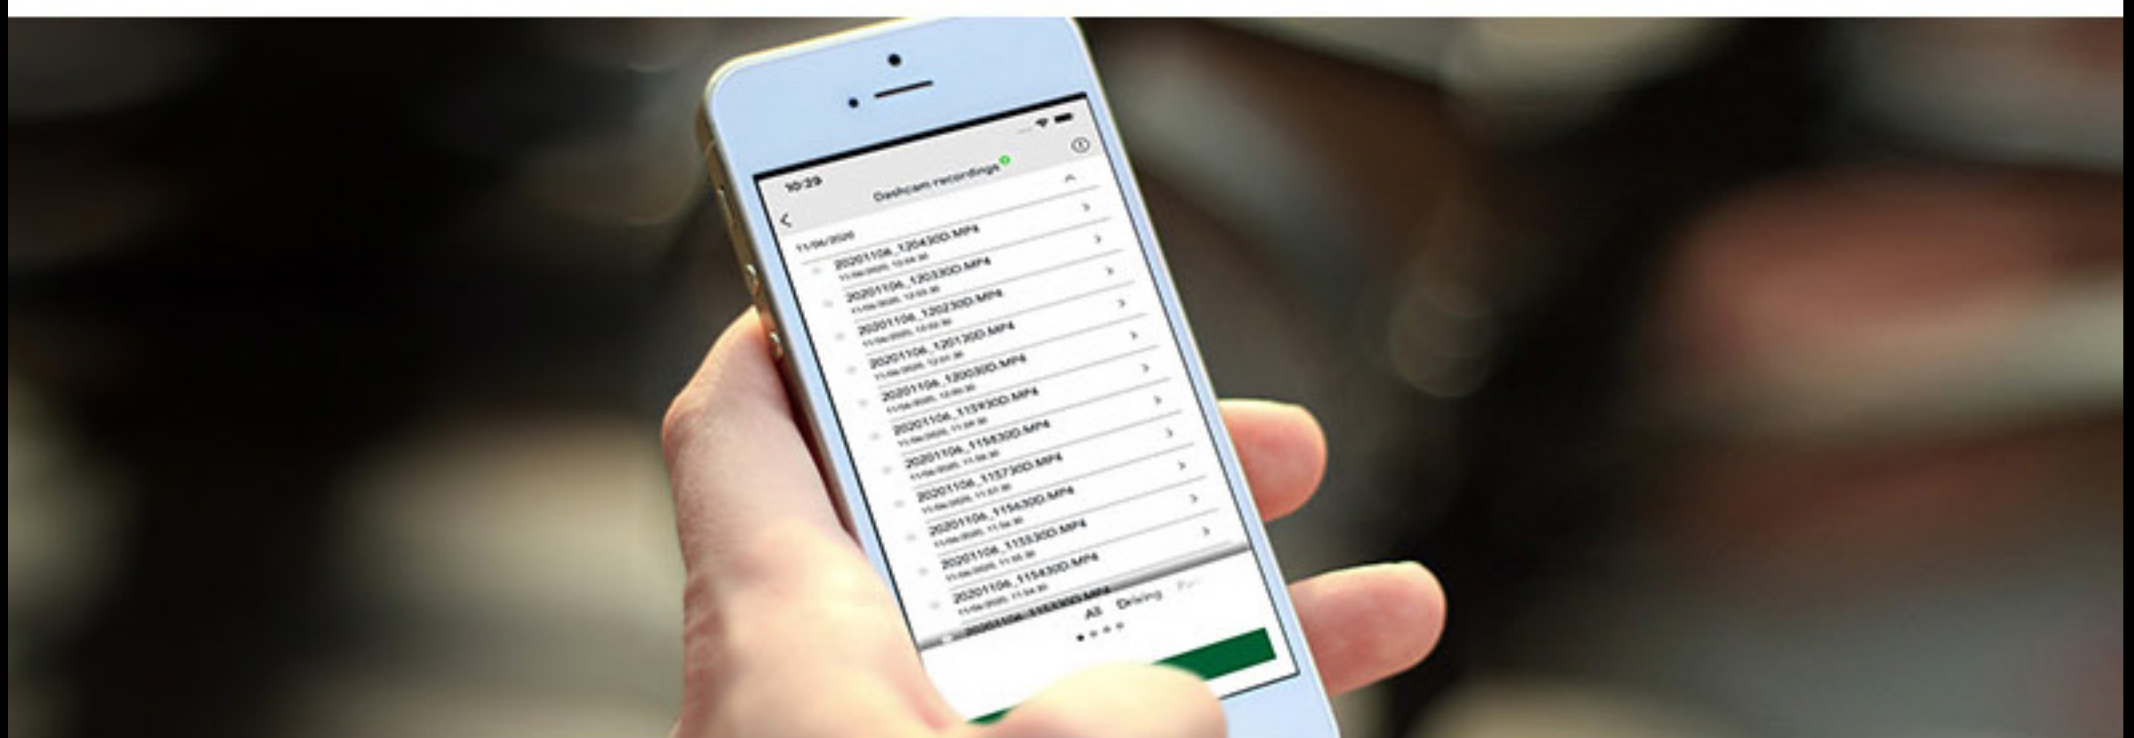

FRONT AND REAR VISION

When in-built 'G-sensors' are alerted, Dash Cam recording commences whether your vehicle is parked or in motion. The removable front camera has a wide viewing angle, while the fixed rear camera has an adjustable viewing setting to suit your vehicle's environment. Both cameras are installed directly into the vehicle power with discreet wiring and have low power consumption for extended use.

UNIQUE TO YOUR LAND ROVER

Onboard GPS enables optional speed and location data to be linked to your recorded video files, to create detailed records of each event. And, unique to Land Rover, your vehicle's Dash Cam can also be accessed and controlled by the Land Rover Dash Cam app, which is available for download on both Apple App Store and Android Google Play.
